

GULLCO

DRY PAK®

EXTENDED MOISTURE CONTROL WELD ELECTRODE DISPENSER

EXTENDS
QUALITY
CONTROL FOR
ELECTRODES!

Maintains electrodes from the holding oven below AWS and ASME allowable moisture levels for more than 24 hours.

DISPENSES
ELECTRODES
ONE AT A TIME!

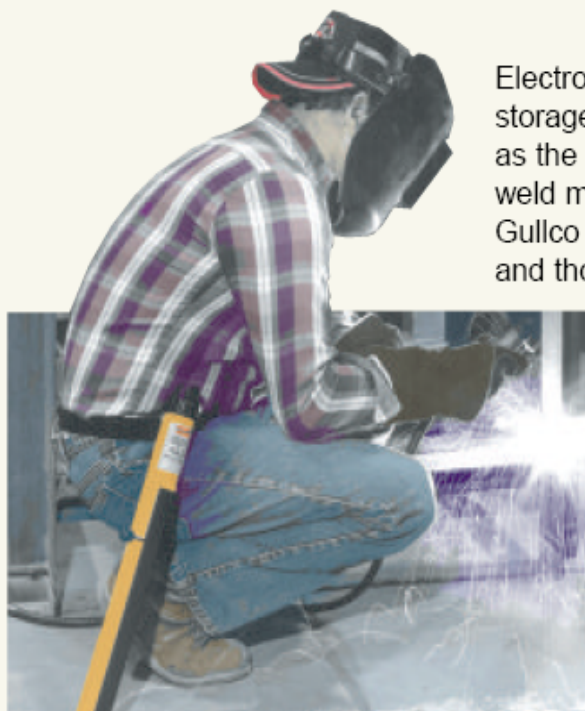

Slide ejector dispenses electrodes one at a time while maintaining moisture-free electrode quality.

DOES NOT NEED
POWER...USE
ANYWHERE!

Entirely portable. Does not require power. No restrictive extension cords. Use anywhere.

Electrode moisture absorption between oven storage and welding has long been recognized as the cause of high levels of hydrogen in the weld metal and costly weld rejects/failures. The Gullco Dry Pak provides an effective, affordable and thoroughly proven solution to this problem in the form of an entirely portable, self-seal moisture-resistant electrode dispenser. Take a moment to check the features above and the performance/size data on the reverse of this sheet ...then contact Gullco or your distributor and put Dry Pak dispensers to work in your operations.
